

Electric Vehicle Frequently Asked Questions

Rates – The average rate for one hour of charging will be \$1.00. Rates will be added to any underlying parking fees in the area.

Parking Limits – Parking spaces designated for charging stations link will be available as indicated on accompanying signs, either for first-come-first-serve use by any vehicle, for charging use only if reserved, or for charging use only. Vehicles that are charging may remain in a parking space for up to four hours, even if a shorter time limit exists in the area. Charging fees may continue to be imposed for use of the designated spot even after charging is complete. Electric vehicles that are not charging will be treated like any other vehicle for purposes of parking restrictions.

Reservations – In the future some of the Coulomb station spots can be reserved online, if you are member of their network, if a station is reserved, then non once else may park there during the reservation time, which will be indicated by a scrolling message on the station screen.

Monthly Contracts – Stations available for monthly leasing can be arranged through the ramp manager where the station is located. For more information click <u>here</u>.

Permits for Charging Stations Installation

As electric vehicles hit the market, charging stations will begin to be installed at residences, places of work, and commercial destinations. The electrical service required for a Level 2 charging station is similar to that of an electric range or home dryer. Permits for installation of Level 2 charging stations at residential or commercial locations are available from the City of Saint Paul Department of Safety Inspections.
